

MARKET DATA

Market Data Hub

Every rate, curve and price through one managed feed. No hand-keyed uploads.

THE PROBLEM

Rates, curves and prices arrive from every provider in a different shape, and most of it still lands as a hand-keyed upload.

HOW IT WORKS

Bloomberg · Refinitiv · CME Group · 360T · Deutsche Boerse · OANDA ·
central banks

one governed feed

out to **SAP** and non-SAP, both directions, no code

WHAT IT DELIVERS

- ◆ One feed controls every provider's entitlements and usage in a single place.
 - ◆ The same number reaches every system that needs it, SAP and non-SAP, both ways.
 - ◆ The point-to-point scripts and manual uploads retire behind one source of truth.
- ◆ one managed feed | ◆ every provider | ◆ SAP + non-SAP | ◆ no hand-keying
