

TREASURYCENTRAL, POWERED BY ONEPILOT

Digital Co-Worker

A TreasuryCentral application

An AI colleague for the manual middle.

One application, in four lines.

What it is

An AI co-worker for every person on your team; it does the busywork across your systems, in chat or in the background.

What it replaces

The manual middle of every request: read, check, open the system, key in, write back.

What you get

Less busywork, more judgment; every step checked and logged.

Who it is for

Every person on your team, inside your SAP landscape.

Then the use cases, followed end to end.

THE PROBLEM

Real work is a dozen small steps across a dozen systems.

A REQUEST ARRIVES

An email, a message, a form.

THE MANUAL MIDDLE

Read it, check the balance, open the system, key in the record, write back.

YOUR SYSTEMS

SAP, email, files.

WHERE IT SITS

One platform. Every application. Grounded in SAP.

The Digital Co-Worker is the AI application inside TreasuryCentral, the shipped edition of OnePilot. Its use cases run in production at chemicals and agricultural customers.

An AI colleague for the manual middle.

It does the busywork of a request across your systems: read it, check the balance, open SAP, key it in, write back.

THE PROBLEM IT REMOVES

Real work is a dozen small steps across a dozen systems.

A request arrives as an email, a message or a form, and a person works it by hand.

WHAT IT DOES, STEP BY STEP

- 1 Reads the request: an email, a message, a form.
- 2 Pulls what it needs from your systems.
- 3 Carries out each step and drafts it in SAP, every action logged.
- 4 Confirms in chat; the moves that matter wait for a person.

WHAT YOU NO LONGER DO BY HAND

Reading each request, checking balances, keying into SAP, writing back.

The copy-paste across a dozen systems, all day.

You keep the judgment; the busywork is gone.

CONNECTS TO email · files · forms → SAP S/4HANA & ECC · outputs SAP process steps, records, confirmations, replies

Any document, any trigger, into SAP.

CONNECTS VIA RFC / OData · AMQP · SFTP · REST · HTTP · Email · Excel add-in

Any document in, the right action out, with a person on the moves that matter.

Intercompany Funding Request

Intercompany funding: when one company in a group lends cash to another, run through the group's own in-house bank.

BEFORE · TODAY, BY HAND

At a chemicals group, subsidiaries email the in-house bank (the group's own internal bank) to ask for funding. A treasury analyst reads each email and keys it into SAP by hand, across email, SAP in-house cash and the live cash position. Volume spikes at month-end.

AFTER · THE DIGITAL CO-WORKER, IN ORDER

- 1 Reads the funding email.
- 2 Pulls out amount, currency, entity and value date.
- 3 Checks the group cash position and the intercompany limit.
- 4 Drafts the funding memo in SAP.
- 5 Routes it for approval.
- 6 On sign-off, posts and confirms back to the requester.

A person approves the moves that matter.

Remittance Advice Gate

Remittance advice: the note a payer sends listing which invoices a payment covers.

BEFORE · TODAY, BY HAND

Remittance advices arrive by email, sometimes in the body, sometimes as an attachment, in every layout. A person reads each one and keys it into SAP by hand.

AFTER · THE DIGITAL CO-WORKER, IN ORDER

- 1 Reads the email, body or attachment, in any format.
- 2 Identifies and structures the advice data.
- 3 Validates it against your SAP customer master and invoices.
- 4 Delivers it to SAP S/4HANA, or a processor like Serrala or HighRadius.
- 5 Flags anything odd for review.

A person sets the guardrails and reviews the exceptions.

Bank Statement Intake

camt.053 / MT940: the standard electronic bank-statement formats SAP reads.

BEFORE · TODAY, BY HAND

A logistics group banks with dozens of institutions; several send statements the SAP bank-connectivity channel never sees, each in its own format. They sit in a mailbox or a data lake, and the day's cash operations wait on them.

AFTER · THE DIGITAL CO-WORKER, IN ORDER

- 1 Reads a statement in any format: PDF, CSV or a proprietary line-item report.
- 2 Turns it into camt.053 or MT940, or any target format.
- 3 Validates it and delivers it to SAP cash management in time for the day's cash operations.
- 4 Monitors completeness and timeliness across every bank.

Alerts on anything missing or odd; a person steps in only then.

Cash-Management Assistant

Our internal demo: cash positioning with the Digital Co-Worker, entirely in chat. Shown as a working demo, not a customer deployment.

BEFORE · TODAY, BY HAND

Cash decisions need timely information, pulled from several systems at once. Where is the cash, and what should move today?

AFTER · THE DIGITAL CO-WORKER, IN ORDER

- 1 You ask where the cash is, in plain language.
- 2 It pulls the position across your accounts; no report to run.
- 3 It suggests payment requests from the position.
- 4 It answers follow-ups in chat and shows the result.

The moves that matter wait for a person to sign off.

Cash Flow & Exposure Hub

Exposure: the money at risk from currency or price moves, which treasury hedges.

BEFORE · TODAY, BY HAND

Cash-management and FX-exposure data comes in Excel, CSV and PDF from departments that do not use SAP. Someone converts and maps each one into SAP by hand, in time for cash and hedging decisions.

AFTER · THE DIGITAL CO-WORKER, IN ORDER

- 1 Collects cash-flow and exposure data from any source, any format.
- 2 Validates it and maps it into your SAP naming.
- 3 Integrates it with cash and exposure management in S/4HANA or ECC.
- 4 Enriches it for analytics and reporting.
- 5 Monitors every flow for completeness and timeliness.

A person acts on the position; the assembling is done.

Governed, in plain terms.

The same four controls run under every application, the AI included: it is grounded in SAP, not free-floating, and keeps a human in the loop on the moves that matter. What each control means, and why it matters:

Audit trail

Every action is logged and can be reviewed later, end to end. Nothing happens off the record.

Four-eyes / segregation of duty

The person who enters something is not the one who approves it. A human stays in the loop (HITL) on the moves that matter.

Anomaly alerts

The system flags what looks wrong before it posts, not after, so a bad value is caught on the way in.

Manage by exception

People only touch the cases that need judgment. The rest just runs, and you hear about the odd one out.

AI grounded in SAP, with a human in the loop. · Certified to ISO 27001 and SOC 1 Type II.

Live deployments, real industries.

Two production deployments, each replacing a manual or custom-built way of working.

AGRICULTURE

SAP S/4HANA, private cloud

Remittance Advice Gate, run by the Digital Co-Worker.

Guardrails set; the person taken out of the routine path.

REPLACED

Replaced an expensive custom third-party solution.

CHEMICALS

SAP S/4HANA, on-premise

The intercompany funding process, run by the Digital Co-Worker.

A complex process with many SAP touch-points, fully automated.

REPLACED

Replaced a manual solution.

CONTACT

Let's map your first request.

We build the autonomous treasury one use case at a time, on the platform you already run.
