

Find the SAP companies that already feel the problem, make Brisken the trusted answer, then book the demo

Brisken closes more than nine in ten warm leads. The gap is getting in front of the right companies at the right moment, not closing. This plan produces warm, well-timed meetings for three products and hands them to you to demo.

>90%

your close rate on warm inbound (your figure)

3

products: Market Data Hub, Trade Automation, OnePilot

24

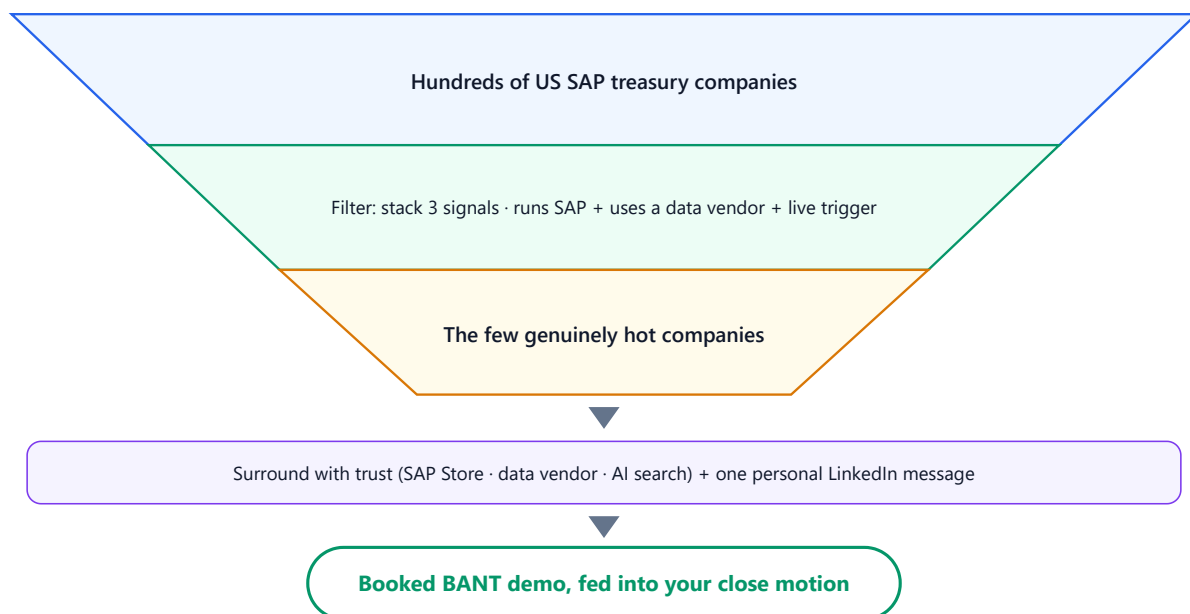

US SAP companies verified; top 7 vendor-checked

0

leads from the prior ~2M cold emails

How the campaign works

Volume in, precision out. Many SAP companies narrow to a few hot ones, who get surrounded with trust and one personal message, then a demo, then your close.

Why precision, not volume

- The high-volume route was already tried here: ~150 mailboxes, roughly 2M cold emails, **zero qualified leads**.
 - A system that touches the SAP money core is too high-risk to earn a meeting from a stranger in an inbox.
 - These buyers move on trust, timing, and seeing peers already use it.
 - So the metric is warm, well-timed meetings, not emails sent. The outreach this ends in is personal, not a blast.
-

Why now

- SAP ends ECC mainstream maintenance in 2027 (2030 extended); 59% of SAP shops are already on S/4HANA, up 13 points in a year (Precisely, 2025).
 - Migration is when the market-data plumbing into SAP gets rebuilt or replaced. That is the buying window.
 - OnePilot is the buy-instead-of-rebuild answer: governed, provider-agnostic, no custom code.
 - Brisken's SAP co-innovation partnership makes it the credible one.
-

Three products lead the motion

Lead with the three whose buyer and pain are sharpest; carry the rest as proof of range.

Market Data Hub (flagship)

- **Who:** SAP treasury teams, multi-currency, hedge accounting.
- **Signal:** pipe Bloomberg / Refinitiv / 360T rates into TRM by hand or custom code.
- **Pain:** bad or late data is costly; the migration forces a rebuild-or-buy now.

Trade Automation

- **Who:** in-house FX / derivatives / commodity desk on SAP.
- **Signal:** 360T, FXall or Bloomberg FX GO; active hedging; front-office hiring.
- **Pain:** trades re-keyed from the platform into SAP TRM by hand.

OnePilot platform (the range)

- The no-code orchestration layer on SAP BTP; the other apps (Cash Flow & Exposure, Bank Fee, Credit, Remittance, ESG) ride as proof one layer covers the whole estate, not eight campaigns.
- Best forwardable: the Calvin AI co-worker clip (reads an email funding request, creates the SAP bank transfer end to end). Brisken already runs Remittance live on ChatGPT.

Beyond the suite: OnePilot for FSI

Briskin's 2026 banking play targets banks, a different buyer. Its own track and research, not part of this plan.

How we choose who to contact: three signals that stack

1

Right system

Runs SAP treasury or finance (ECC or S/4HANA)

2

Proof of the pain

Uses a data vendor (Bloomberg, Refinitiv, 360T, FXall, OANDA, CME): the pain is real, and it picks the product

3

Right moment

A live trigger: SAP-treasury hire, S/4HANA migration, new treasurer, FX/hedging in the annual report

- **The sharpener:** SAP + a data vendor means someone is getting that feed into SAP by hand or a fragile script, exactly what we replace. Proven pain beats a guess.
- **Ranking:** all three signals first, then SAP + confirmed vendor, then SAP + live trigger with vendor still to confirm.

Proof: companies already found and pain-checked

COMPANY	SAP / TIMING SIGNAL	DATA-VENDOR SIGNAL	READ
Colgate-Palmolive	Live SAP Treasury build (TRM, Cash Mgmt, BAM, SWIFT)	Confirmed Bloomberg (3 own postings)	Hottest. "Bloomberg into SAP"
Corteva	Active S/4HANA TRM build, hedging; ~\$953M FX book	Confirmed 360T + Bloomberg (own job post)	Lead MDH, tee Trade
Johnson & Johnson	5+ open SAP S/4HANA treasury roles at once	To confirm FX/derivatives + SWIFT	Strongest timing
Ford	Two live SAP-TRM modernization roles	To confirm heavy FX/commodity hedging	Confirm promotes to top
Toyota (TFS)	Live S/4HANA TRM build, mid-migration	Context own treasury system since 2006	Time it to the migration
Penn Turnpike	Live ECC→S/4HANA Treasury migration	Greenfield no current feed	MDH only (no FX desk)
Amtrak	S/4HANA migration in progress	Weak fit small portfolio, no trading	Light-touch only

The vendor signal lives in the job-post wording. Two name their tools outright. 17 more verified companies (Microsoft, Google, Estee Lauder, Adobe and others) checked next; full source list with the exact quote per company on hand.

The engine, end to end

1

Sweep

Weekly scan for the 3 signals; rank by warmth

2

People

3-5 decision-makers per company

3

Trust

Seen on SAP Store, AI search, vendor angle first

4

Outreach

One personal, signal-anchored LinkedIn note

5

Book

BANT-checked; meeting in your calendar

6

Repeat

Sweep refills; your feedback sharpens it

Surrounding the company with trust

Cold volume carried no trust. These borrow it from places the buyer already trusts, aimed at the same companies.

SAP channel

LIVE: OnePilot on the SAP Store, assistant surfaces it

- **Co-sell:** the big prize; your sign-up, our business case. Slower.
- **Store search:** tune listings to surface on "market data into SAP". Now.
- **ASUG:** content + a speaking slot.

Data-vendor channel

LIVE: OnePilot governs Bloomberg/Refinitiv/360T/CME/OANDA

- **Public signals:** "uses Bloomberg + runs SAP" is target and hook. No permission.
- **App stores + joint content:** where a vendor tie is close enough. Your call.

AI search and content (always-on)

- Be the answer when someone asks ChatGPT/Perplexity "how do I get market data into SAP". The topic is narrow, so it is winnable.

- Already prepared: 30 of the exact buyer questions mapped to the right product, plus draft answer pages and an SAP Store tuning plan, ready to publish on your go-ahead. No spend, no live action until you approve where it is hosted.
- A slow build, not a same-week lead source: it makes buyers arrive warmer and backs every personal message. Runs underneath LinkedIn, not instead of it.

What the outreach looks like

LinkedIn open (a Bloomberg-on-SAP company)

Noticed {Company} runs SAP treasury and lists Bloomberg in your postings. Usually someone is keying rates into SAP by hand, or babysitting a script that breaks at month-end. Brisken's Market Data Hub governs that feed into S/4HANA, no code, listed on the SAP Store. Send a one-page teardown of your setup?

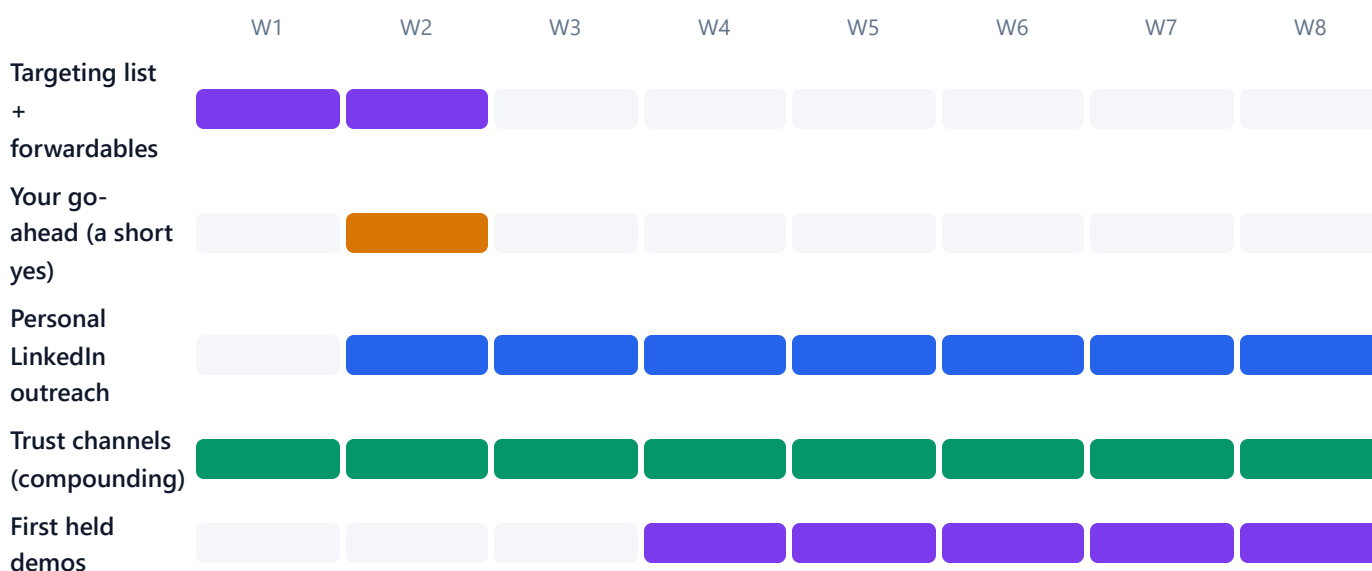

The forwardable one-pager

- Their public signal quoted back, the manual step it implies, what MDH does instead, a 15-minute look.
- Built to forward up to the budget owner; SAP-listed and co-innovation trust marks on it.

Illustrative; final copy signed by the Brisken identity you approve.

How it rolls out

The build needs no spend and no go-ahead. Going live needs one short yes from you.

One product live at a time to first proof: Market Data Hub leads, Trade Automation onto the same companies, then the platform widens the set.

Built-in go/no-go checkpoints (so this never becomes an open-ended grind)

- **Week 4:** if the targeting and trust groundwork has produced no qualified reply, we re-cut the list and the message before going wider, not push more volume.
- **Week 8:** if nothing has booked, we pause new outreach and diagnose which of list, message, or product-fit is the miss, and decide together whether to continue.
- **Week 12:** if held demos are not turning into real pipeline for you, we stop and reassess the motion rather than keep spending your time and ours.

What counts as a lead

You pay for held meetings with documented BANT evidence, nothing softer. Mechanics yours to confirm.

B

Budget

Live project, relevant hiring, or a migration deadline forcing spend

A

Authority

Job title on the agreed target list for that product

N

Need

Stated pain, or an active S/4HANA data-integration project

T

Timeline

Stated, or implied by the ECC 2027/2030 deadline

- Reply → short qualifying exchange → meeting booked into your calendar with the evidence attached.
- You take the demo; a missed meeting counts only if rescheduled and held within 2 weeks.
- Accept or reject within 48h with a one-line reason; rejections sharpen the targeting.

Commercial shape

- **Your offer as we understood it (to confirm at terms):** a fixed fee per accepted BANT lead plus a commission on closed deals.
- **To settle:** commission % and basis (first-year subscription value is the SaaS norm), payment trigger, and how long a lead stays credited to us (the cycle runs 6 to 18 months, so the credit window has to match it).
- **Running cost is now small:** a LinkedIn Sales Navigator seat (~\$99/month) is the only hard cost to the first demo; heavier tooling added only as a product proves it books.
- **One note:** content / AI search / co-sell build your own inbound and are harder to credit to a single lead; we agree how at terms.

What we need from Brisken

ITEM	WHY	WHEN
Sending identity sign-off	Whose real Brisken profile fronts the outreach	Before outreach
Which vendor relationships are active	Which vendor channels we can open vs only spot from public signals	Before that channel
Demo owner per product	Who takes the MDH, Trade and platform calls	Before that product goes live
Go-ahead + one Sales Navigator seat	Green light + the only hard cost (~\$99/month)	To start outreach
A calendar/booking link	Qualified replies book into your diary	Before week 4

On us: research and the weekly sweep, contact sourcing and verification, the trust groundwork, copywriting and the forwardables, outreach, qualifying, booking, and a weekly note.

Honest expectations

- Precision market: small, senior lists per product.
- Early output: a few held, qualified meetings per month in months 1-2, growing as more companies are added and the trust channels compound.
- First meetings land in weeks 4-8, possibly earlier via LinkedIn.
- Conversion is unknown until live; we control list, message, and qualifying quality.
- Honest on the close rate: your >90% is on warm inbound that already raised its hand. The companies we source are colder, so they will close below that until the trust groundwork compounds. The BANT gate exists to narrow that gap, not to claim it away.
- The economics: well-matched, signal-checked companies fed into a motion that already closes well, with the gate doing the work of getting them as close to your fit bar as a sourced lead can get.
