

| ONEPILOT · SMART TRADING

Smart Trading

Every trade, from the decision to the booked deal in SAP. Automated, on your own system, nothing to rebuild.

You trade. You book in SAP.
Today a person joins the two by hand.

Sound familiar? Tickets re-keyed by hand, approvals chased through inboxes, and a trade that isn't done until someone books it.

It works with whatever you already run.

Any venue, in

Connect any trading platform or exchange, with nothing to swap out. FX, derivatives, investments, securities and OTC commodity swaps.

CONNECTS TO VENUES LIKE

360T · FXall · Bloomberg FX GO · Citi Pulse · BidFX — and more.

Any system, out

Send the finished trade into SAP Treasury, or into the treasury system you already use. No lock-in on either end.

BOOKS STRAIGHT INTO

and any other treasury system you use.

One layer between your venues and SAP.

Six steps, from the decision to the booked deal.

Each step runs on its own or waits for a person. Approvals, splitting and grouping are built in, and everything is logged.

The manual middle, gone.

Manual today

~12 min

With Smart Trading

<1 min

*Manual FX execution: 10–15 min per trade — The Association of Corporate Treasurers.
Spot FX automation now ~90% — LSEG.*

Straight to SAP

The trade flows from the venue into SAP Treasury on its own, checked and logged.

Approvals, not waiting

Sign-off routes to the right person in the tool, so nothing sits in an inbox.

Nothing re-typed

No re-keying tickets or building deal entries by hand; the busywork is gone.

The controls are built in, not bolted on.

A full audit trail

Every action is recorded, end to end.

Four-eye approval

The moves that matter need a second person.

Automatic checks

Odd or bad data is caught before it reaches SAP.

Alerts on exceptions

You hear about the odd one out; the rest just runs.

No code to change it

Your rules, changed by your team, no IT project.

ISO 27001 and SOC 1

The security controls your auditors already expect.

Under the hood, it's a single app: **OnePilot**.

OnePilot is the layer underneath. It moves your data cleanly between systems, both ways, across SAP and everything else, with the checks and the AI built in. One way to connect to all of it:

SAP systems

Spreadsheets & files

Email

Web & APIs

It reads and writes to each of them, so the trade lands where it needs to with nothing re-typed.

We are the AI layer for SAP treasury.

Built into SAP

An SAP co-innovation partner. Smart Trading runs on SAP's own cloud, so it sits inside your landscape, not beside it.

Every venue you trade

Direct links to the platforms your desk already uses: FXall, Bloomberg, 360T, Citi Pulse and BidFX.

Yours to change

No code to run it. Your team keeps it in step with how you trade. Customer teams already build on the platform.

1

platform for every venue

6

steps, decision to deal

0

code to set it up

Built to stay done.

Give us twenty minutes on how your trades reach SAP, and we will show you the manual middle disappearing.
