
Campaign Status and Plan

Meji Media, 3 September 2026. Where every campaign in the Instantly account stands today and exactly what happens to each at the September launch. All figures pulled live from the account on 3 September 2026.

Every campaign, status and plan in one view

Campaign	Loaded	Emailed	Never emailed	What happens now
Corporate: Decision-Makers (A)	589	589	0	Stays and carries the push: sequence swapped for approved Version A (3 emails), fresh decision-maker contacts loaded, sending resumes. History kept
Corporate: Organisers (B)	434	431	3	Same, with Version B. The 17 people left mid-sequence at the pause stay closed; the 3 never emailed ride into the new run
Corporate: Big Companies in UK	880	622	258	Your call: finish it on its old copy (not recommended), retire it, or fold the 258 into A or B by job title after address re-verification (my recommendation). The 9 frozen mid-sequence stay closed on every path
Corporate: Named accounts (C)	Not built yet			The one new campaign, because none exists: Version C (3 emails) to the hand-picked company list, confirmed with you at load
Christmas: Warm Re-engagement	907	906	1	Finished in practice; nothing sends this cycle
Christmas: Bookers	983	982	1	Same
Christmas: Cold, three cities	569	569	0	Same. New Christmas outbound would need fresh lists: a separate conversation, worth having soon since September and October are when your enquiries peak

The corporate campaigns send from the three mejievent mailboxes; Christmas sent from mejimedia.com, mejimedia.co and mejixmas.com. Three further campaigns run under MejiAI and Banter on separate mailboxes; they sit outside this engagement and nothing here touches them. Big Companies in UK predates my involvement, so the reason it stopped is not known here.

The fresh list

The target audience is the July brief, unchanged: UK-wide, 50 to 2,000 staff, 17 event-buying sectors; decision-maker titles (HR Director, Head of People, Head of Events and similar) go to Version A, organiser titles (Office Manager, EA, PA to the Board, HR Manager and similar) to Version B. Roughly 41,000 people match; about 17,000 survive the filters. The list is pulled at launch so the data is freshest, which is also when your Apollo credits get spent. New contacts only: every batch passes five checks before loading (off-target names out, your past customers out, anyone ever emailed in any campaign out, risky mail gateways out, then address verification).

What September can carry

The push sends from three mejievent mailboxes at 30 emails a day each, 90 in total. At three emails per person that supports about 30 new people a sending day: roughly 650 across a full month of 22 sending days, and nearer 450 to 500 with a launch in the second week of September, against the 1,500 to 2,000 a month the plan was built around. The bottleneck is the mailboxes, not the list.

A second sending domain with three more mailboxes doubles that. New domains need three to four weeks of warm-up, so one started this week comes into service late September to the first week of October, depending on how the warm-up goes; its mailboxes fold into A and B once warm.

	Now	With the second domain (early October)
Sending mailboxes	3	6
Emails per day	90	180
New contacts per month	About 650	About 1,300

Both columns are full-month run rates at roughly 22 sending days a month.

Order of work at the go

Authentication first step (mejievent.com is still on monitor-only; it steps to full strength over the month as the reports stay clean), update the two campaigns and build the third with stop-on-reply and bounce protection on, pull and filter the list, test send into your inboxes to check placement, load, final check, resume sending. Two to three days once the test inboxes are in.

Campaign figures pulled live from the Instantly account on 3 September 2026. Copy references the emails approved on 29 July 2026. Audience sizing from the Apollo search of 29 July 2026.
