

| ONEPILOT · TREASURYCENTRAL

TreasuryCentral

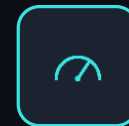

One cockpit for the whole treasury, on your live SAP data. Market data, trading and AI, in one governed layer.

Your live SAP data

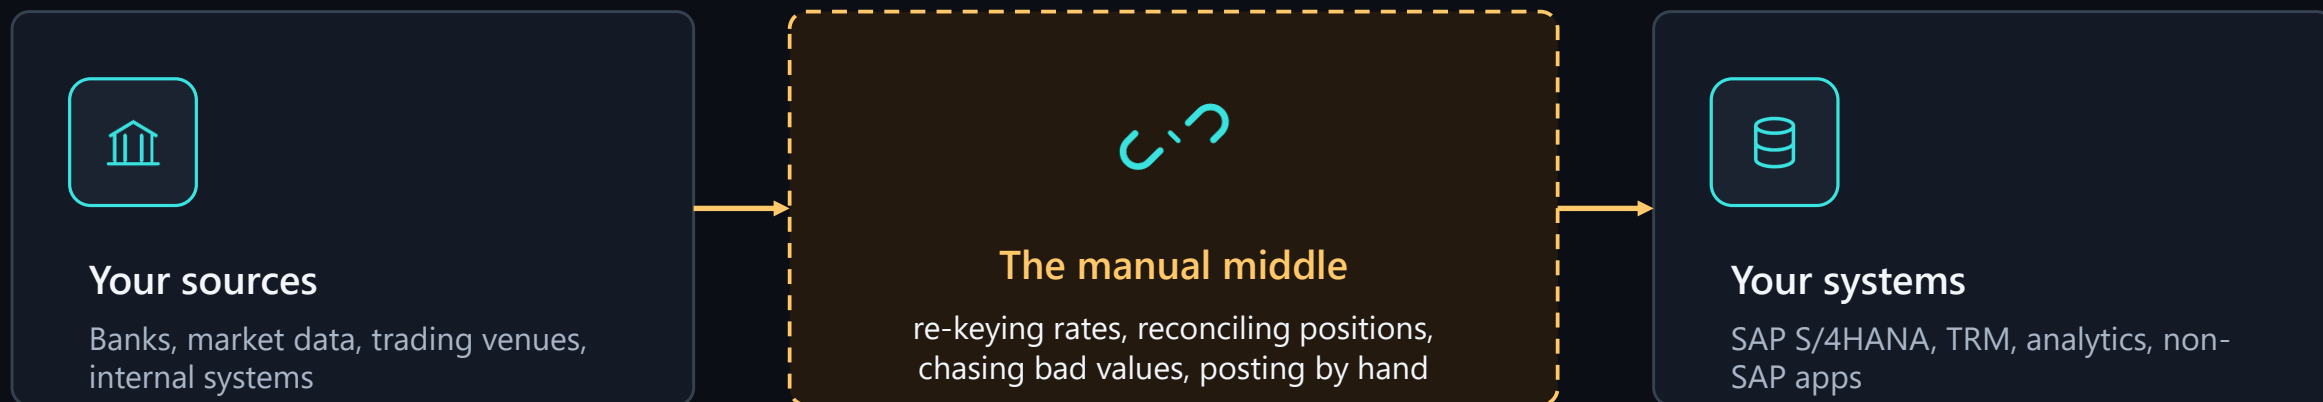

TreasuryCentral

Every treasury decision

A global treasury runs one process.
The data behind it lives in a dozen places.

TreasuryCentral is that middle, so one clean, governed set of data drives every treasury decision on its own.

One cockpit for the whole treasury.

The command center your team runs treasury from, on live SAP data, with market data, trading, and AI automation and orchestration around it. **All live with customers today, not on a roadmap.**

Market data

Every rate and reference, curated once

Trading

From capture to the deal in SAP

AI automation

Digital co-workers on your SAP data

All of it runs on **OnePilot**, on your own live SAP data (S/4HANA, ECC, TRM), checked and logged on every value.

Three engines, one governed layer.

Market Data Hub

Every rate and reference you rely on, from any source to every system.

Smart Trading

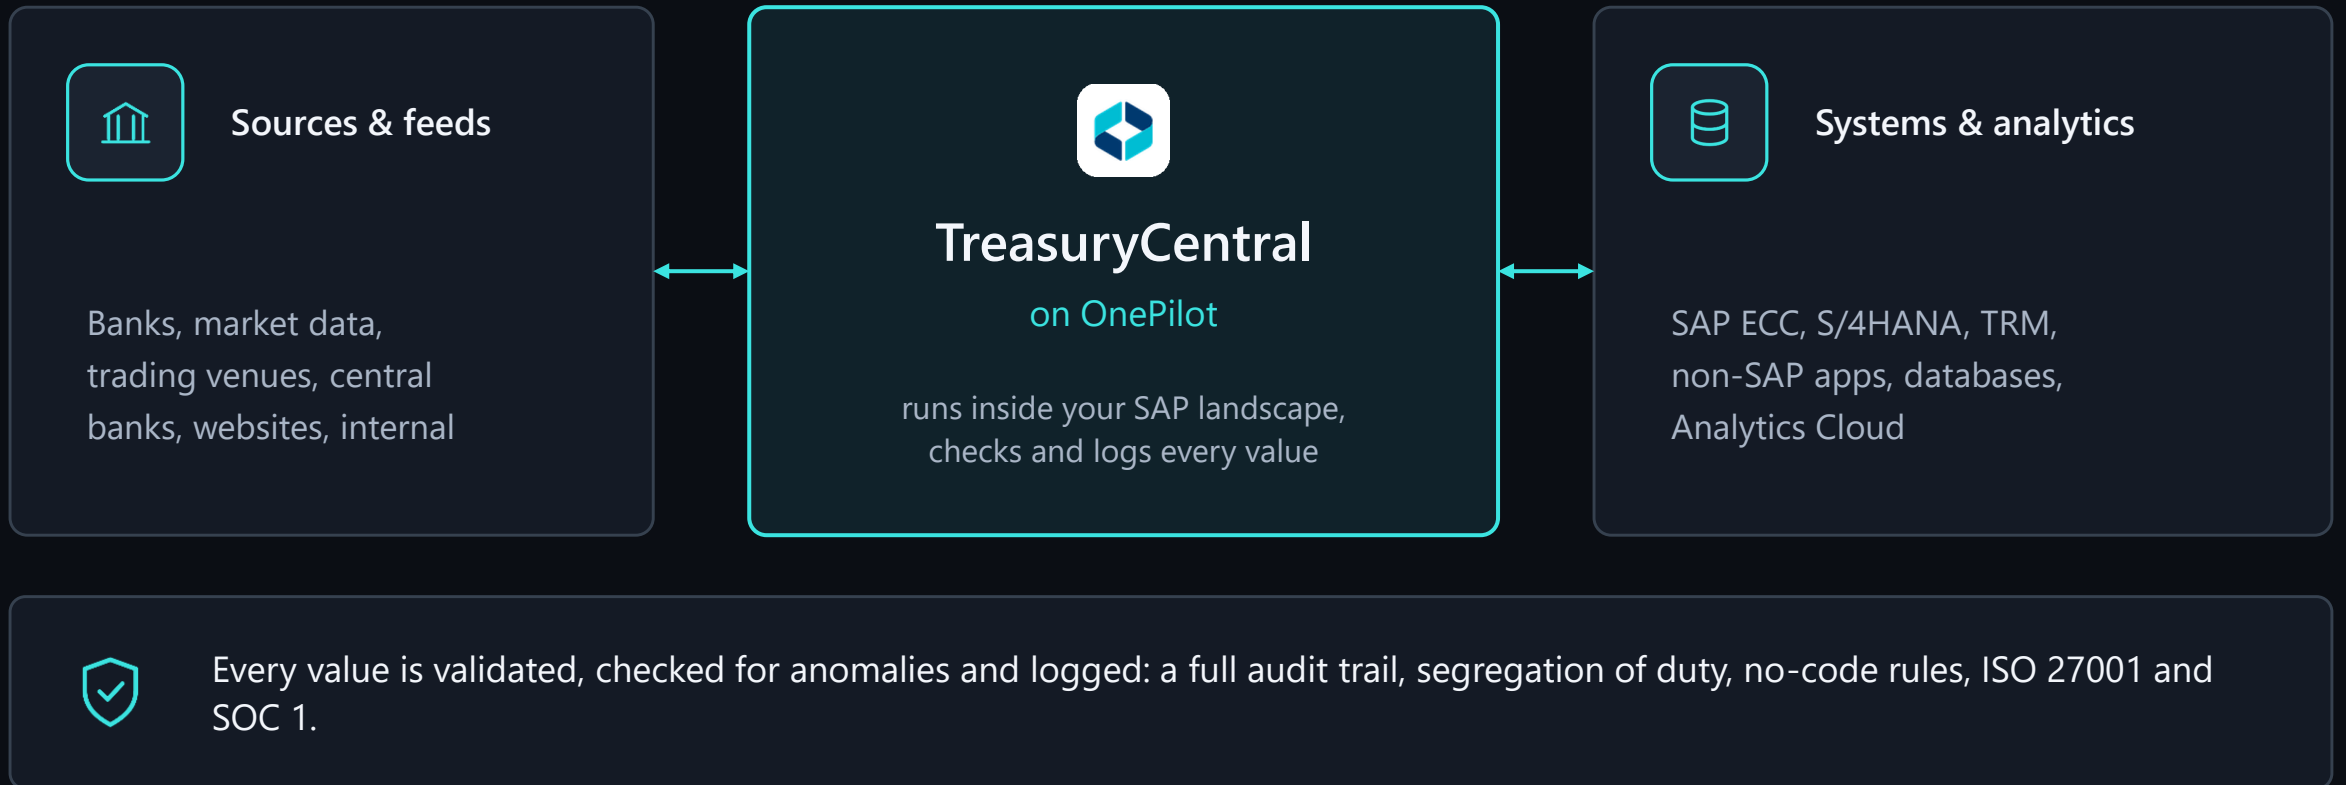

The manual middle between your trading venues and SAP, closed. From capture through to the deal in SAP.

AI automation & orchestration

Digital co-workers that read, decide and post on your own SAP data: remittance advice, intercompany funding, and more.

One layer between your sources and SAP. Both ways.

The controls are built in, not bolted on.

A full audit trail

Every value and every change is recorded, end to end.

Segregation of duty

The changes that matter need a second person.

Automatic checks

Odd or bad data is caught before it reaches a system.

Alerts on exceptions

You hear about the odd one out; the rest just runs.

No code to change it

Your rules, changed by your team, no IT project.

ISO 27001 and SOC 1

The security controls your auditors already expect.

TreasuryCentral is powered by OnePilot.

OnePilot is the layer underneath. It moves your data cleanly between systems, both ways, across SAP and everything else, with the checks and the AI built in. One way to connect to all of it:

SAP systems

Spreadsheets & files

Email

Web & APIs

AI

Live in weeks, not a rebuild. It sits inside your SAP landscape, not beside it.

Live with customers today, not on a roadmap.

Teams like Evonik and RWZ build on OnePilot directly, SAP and non-SAP, on-prem included, and move at the speed of their own ideas rather than a vendor roadmap.

Standardise the process once, governed and analytics-ready, and run it the same way across the whole group.

An SAP co-innovation partner. The cockpit runs on SAP's own cloud, so it sits inside your landscape.

We build the data and AI layer for SAP treasury.

Built into SAP

An SAP co-innovation partner. The cockpit runs on SAP's own cloud, so it sits inside your landscape, not beside it.

Any source, any system

Provider and target agnostic. Pull from any feed, push to any system, SAP or not, and change your sources any time.

The whole treasury layer

Market data, trading and AI automation, governed in one place, with no code to run it.

1

cockpit for the whole treasury

0

code to run it

360°

audit on every change

Built to stay done.

When we talk, we will show TreasuryCentral live on your SAP data: the process, the analytics and the governance, end to end.
