
LinkedIn repositioning copy: Dirk's profile + Brisken company page

For: Dirk (review + publish) **From:** UnpauseAI **Date:** 2026-06-29 **Status:** draft for review. Publishing happens on Dirk's own profile and the company-page Super Admin; we do not publish for you, we hand you the copy.

This mirrors the post-event outreach: lead with the treasury outcome, OnePilot as the governed AI layer underneath, live with customers today. It anchors on the wording Dirk already approved for the event-app bio and the live brisken.com hero, so the profile, the page, the website and the outreach all read as one company. The Universal-UI / Verve vision is deliberately kept off the public profile (see "What we kept out" below); it stays the in-room reveal, not the public headline.

1. Dirk Neumann (personal profile)

Headline (220-char field)

Recommended:

Founder & CEO at Brisken | I used to consult on treasury systems; now I build them. AI-powered treasury software on your SAP data, governed, live in production.

Alternatives:

- Founder & CEO, Brisken | Treasury, run by AI. Governed SAP financial data, live with customers today, not on a roadmap.
- Founder & CEO, Brisken | AI-powered treasury applications on your SAP data: cash, trading, market data, remittances. Governed, no code, live today.

About (2,600-char field)

I spent years as a consultant, telling treasury teams how to fix their systems. The advice was usually right. Watching it sit unbuilt in slide decks got old, so I stopped advising and started building. Brisken is what came of that.

We make AI-powered software that runs treasury operations directly on your SAP data: cash, trading, market data, remittances. It isn't another dashboard, and it isn't a roadmap of someday features. It runs in production, with real customers, today.

How it fits together is simple. TreasuryCentral is the single screen your team works in. Underneath it, OnePilot, our AI layer, does the actual work, operating Market Data Hub, Brisken Smart Trading and the Remittance Advice Gate across your SAP data, governed from end to end. Your people set the rules and approve the exceptions; the agents handle the rest. The manual handoffs disappear; the audit trail doesn't.

Some proof, because it matters more than claims: a customer in agriculture now posts remittances into S/4HANA through a governed AI gate, with nobody retyping anything; a financial-services group runs several data domains from one OnePilot deployment. Brisken is an SAP Co-Innovation Partner, listed on the SAP Store, built on SAP BTP, ISO 27001 and SOC 1 Type II.

I'm a builder at heart, deep in AI, and genuinely allergic to buzzwords. If your treasury still runs on manual handoffs and good intentions, I'd enjoy an honest conversation about it. You'll find me at brisken.com.

Tighter alternative opener (if the punchier version is preferred):

I used to consult on treasury systems. Now I build them. Brisken makes AI-powered treasury software that runs on your SAP data, live with customers today, not on a roadmap. For real conversations, not a pitch.

Experience entry (Brisken role subtitle, optional)

Founder & CEO. Treasury applications that run on your SAP data, governed by OnePilot, live in production with customers.

Featured (suggestion, no copy to write)

Pin the Rome post-event asset hub once it is ready, or the brisken.com homepage in the meantime. This is where the "where this goes" material lives, off the headline.

2. Brisken (company page)

Tagline (120-char field)

Recommended:

Treasury, run by AI. Governed SAP financial data, live with customers today, not on a roadmap.

Site-aligned alternative (matches the current brisken.com hero):

Financial-data platform for SAP. Governed, no code. Treasury applications live with customers today.

About / Overview (2,000-char field)

Brisken builds AI-powered treasury applications that run on your SAP data, live with customers today, not on a roadmap.

Most SAP finance teams move market data, trades, bank files and remittances in and out of SAP with brittle point-to-point scripts. They break when a provider changes a field or the person who built them leaves, with no audit trail and no owner. Brisken removes that.

TreasuryCentral is the single screen treasury works in: cash, investments, debt, FX, market data and governance on one cockpit, on your SAP data. Underneath it, OnePilot is the AI layer that operates the applications and keeps every step governed:

- *Market Data Hub: market data into SAP from Bloomberg, Refinitiv, CME Group, 360T, Deutsche Börse and OANDA.*
- *Brisken Smart Trading (BST): trade automation on your SAP data.*
- *Remittance Advice Gate: AI reads remittance emails and posts them into SAP S/4HANA, so the team stops retyping.*

It does not replace your stack; it sits on top of it and runs it. You set the rules and approve the exceptions; OnePilot does the work humans shouldn't have to.

SAP Co-Innovation Partner and PartnerEdge member, part of SAP Industry Cloud for Financial Services and Commodities, listed on the SAP Store, on SAP BTP, ISO 27001 and SOC 1 Type II.

See it live: brisken.com

Specialties (company-page tags)

SAP treasury, treasury automation, market data integration, S/4HANA, financial data governance, AI agents for finance, trade automation, remittance automation, SAP BTP.

Page assets (not copy)

The live site already carries a "Trusted by" customer-logo strip. If the company page does not carry the same strip, add it; it is the strongest single trust signal and the asset already exists. Use the same logos that are live on the site, in their original full-colour form.

3. What we kept out, and why

- **Verve / the Universal-UI vision, by name.** It is the wow-reveal you close conversations with in the room, private beta. Naming it on a public profile spends the reveal early and pulls the headline off the treasury outcome. The post-event outreach leads with the treasurer's result; the vision is the enabler underneath, not the hook. Kept off both surfaces by design.
- **"Universal UI / whole working day / any role" as a headline.** Same reason the website keeps it off the homepage hero: it reads as a different company to a treasury buyer who came for "Bloomberg into SAP," and it dilutes the proof.
- **Anti-SAP framing** ("one vendor's frozen best practice"). The whole motion leans on SAP goodwill, the Store listing, the Co-Innovation trust mark. Keep that line for the room with a non-SAP-aligned buyer, never in public copy.

Optional, your call: a single forward-looking line at the end of your About ("Where this goes: one governed AI layer across every screen a finance team works in") gestures at the trajectory without naming Verve. Default is to leave it off and keep the profile on the outcome; say the word and I add it.

4. Publish checklist (field mapping + limits)

Surface	Field	Limit	Source above
Dirk profile	Headline	220 chars	\$1 Headline (recommended)
Dirk profile	About	2,600 chars	\$1 About
Dirk profile	Experience subtitle	short	\$1 Experience entry
Company page	Tagline	120 chars	\$2 Tagline (recommended)
Company page	About / Overview	2,000 chars	\$2 About
Company page	Specialties	tag list	\$2 Specialties

All blocks are within the field limits. No em-dashes, no buzzword filler, kept to the voice you already use.

Gated step. Publishing touches Dirk's personal account and the company-page Super Admin, both live systems. We do not publish for you. Tell us to proceed and we will either walk the changes in with you on a screen-share, or you paste each block into the matching field above. Either way the click is yours.
