
Rome 2026 · Hottest-Leads Send Pack for Dirk (v2, 2026-07-07)

Six notes across five accounts, loaded as drafts in your Outlook with the attachments already on them. Nothing is scheduled, nothing sends on its own. Each note delivers what you committed to at the booth, in your words from the recaps.

What changed from the first version:

- **VW now leads with the AI conversation**, per your own note ("very interested in our AI solutions, a strategic initiative at VW") and your recap ("we agreed that we're going to catch up and talk about it"). The 360T-to-EPROX gap stays in as the second thread for the call, and the restructured Smart Trading deck (the old Trade Automation deck, rebuilt) is attached for it.
- **VW is split**. Michael gets the personal note, no cc. Steinar was not at the stand, so he gets his own generic note, in German (block 1b).
- **EPROX, not APROX**. The transcript's "APROX" is EPROX (eproxx.de; their DEALMANAGER for 360T is the bridge between 360T and SAP transaction management). Corrected throughout.
- **JTI now delivers both things you promised**: the PowerPoint and the volume-estimate information. The first version held the volumes back until they sent their list; your recap says you owed them the volume information up front. This one you send personally; the draft still needs your volume figure in the marked spot.
- **Adidas is Carol Tse**, confirmed 2026-07-07 after a LinkedIn review of all the Adidas attendees. The draft is addressed to her.
- **The follow-up ladder is gone**. Each block is one personal note plus a single optional nudge line if it stays quiet for a couple of weeks.
- **The register is professional, not personal**. Rome references stay; lines that perform closeness are out.

Once the post-event Rome page is live, these notes can carry that link (your ask from the recap: the outreach points people at one page with the product material). Not blocking; the sends work without it.

Suggested order:

1. Roche · Alejandro (quick, personal, warmest)
2. VW · Michael, and JTI · Jean-Baptiste (yours personally)
3. LSEG · Alessandro; Adidas · Carol; Steinar anytime

1. VW · Michael Zucknick

- **To:** michael.zucknick@volkswagen.de
- **Cc:** none
- **Subject:** Picking up our Rome conversation on the AI build
- **Attach:** brisken-smart-trading.pdf (restructured Smart Trading deck, for the 360T-to-EPROX second thread)
- **Why this angle:** your note: the AI push is executive top-down and strategic for him, he feels left behind by SAP on on-prem, and he liked the speed and the build-with-us model. You agreed to catch up and talk. Trade automation (the 360T-to-EPROX gap) is the concrete second thread for that call, not the opener. MDH stays out; they run their own hub.

The note

Michael,

Following up on our conversation in Rome; we said we would continue on the AI side.

You described the push for AI at VW as top-down, with something real to build against it. That is the situation Evonik and RWZ were in. Both build on our platform directly, SAP and non-SAP, on-prem included, and they move at the speed of their own ideas rather than a vendor roadmap.

There is a second thread worth twenty minutes when we talk: the gap you described between 360T and EPROX. We close that middle, from capture through to the deal in SAP, and I would rather show it than describe it.

Before the summer or right after, whatever suits you. I will bring the Evonik and RWZ stories.

Dirk

If quiet after ~2 weeks

Michael, a short follow-up on the AI catch-up from Rome. Happy to set something up whenever your calendar allows. Dirk

1b. VW · Steinar Páll Landrø (generic, German, separate note)

- **To:** steinar.pall.landroe@volkswagen.de
- **Cc:** none
- **Subject:** Nach der SAP Treasury Konferenz in Rom: KI auf den eigenen SAP-Daten
- **Attach:** none
- **Why:** he was not at our stand (master list: in_our_booth = No), so no claimed meeting; a generic note in German, standalone, not tied to the Michael thread.

The note

Sehr geehrter Herr Landrø,

wir waren mit Brisken auf der SAP for Treasury and Working Capital Management Konferenz in Rom (Stand 2). Das Thema, das unsere Gespräche dort geprägt hat: KI-Lösungen, die direkt auf den eigenen SAP-Daten laufen, on-prem eingeschlossen.

Teams wie Evonik und RWZ bauen dafür direkt auf unserer Plattform, mit SAP- und Nicht-SAP-Daten, in ihrem eigenen Tempo statt auf einer Anbieter-Roadmap.

Wenn das für Ihre Arbeit im Group Treasury interessant ist, zeige ich es Ihnen gerne in einem kurzen Termin.

Mit freundlichen Grüßen Dirk Neumann

If quiet after ~2 weeks

Sehr geehrter Herr Landrø, eine kurze Nachfrage, ob das Thema KI auf den eigenen SAP-Daten für Sie gerade relevant ist. Über eine kurze Rückmeldung freue ich mich. Dirk Neumann

2. JTI · Jean-Baptiste Disdet (you send this one personally)

- **To:** jean-baptiste.disdet@jti.com, paola.cuello@jti.com
- **Subject:** The MDH walkthrough and the volume information, as promised
- **Attach:** brisken-market-data-hub.pdf (restructured MDH deck)
- **[NEEDS YOU]:** the volume-estimate information you said you would send them; a line or a page, whatever you have. It slots into the marked spot below. The draft will not read complete without it.
- **[NEEDS YOU]:** the third booth contact ("Dominique" / Domenic) has no email in the master list; add him to To if you have it.
- **Why this angle:** you gave the live MDH demo on request and all three were impressed. Your recap: you owe them the PowerPoint and the volume estimates; they owe you their volume estimates and their central-bank list, and you then confirm covered versus build. 2027 budget, so no rush.

The note

Jean-Baptiste, Paola,

Good to reconnect in Rome.

As promised after the Market Data Hub session, both pieces: the walkthrough is attached, and on volumes, [NEEDS YOU: the volume-estimate information from the booth].

From your side, whenever it is ready: your volume estimates and the list of central banks you want to connect. As soon as I have the list I will come back with which of them we already connect and which we would build.

No urgency given the 2027 horizon; the door is open whenever you pick it up.

Dirk

If quiet after ~2 weeks

Jean-Baptiste, whenever it is convenient, the central-bank list is the one thing that unblocks the covered-versus-build answer from my side. Here whenever you are ready. Dirk

3. Roche · Alejandro Herrera La Grotta (personal, send yourself)

- **To:** alejandro_jorge.herrera_la_grotta@roche.com
- **Cc:** dogan.yesil1@hotmail.com (or a separate short note, your call)
- **Subject:** Rafa says hello back
- **Attach:** none
- **Why:** Alejandro asked to talk to you. This is relationship, not a pitch.

The note

Alejandro,

Great to meet you and Dogan in Rome, and thank you for the kind words. I passed your regards to Rafa, and he says hello right back.

You mentioned you would like to talk. Happy to; let me know what works in the next couple of weeks and we will set it up.

Dirk

If quiet after ~2 weeks

Alejandro, no rush at all on this; whenever a call suits you, my calendar is open. Good to be back in touch. Dirk

4. Adidas · Carol Tse (confirmed)

- **To:** carol.tse@adidas.com
- **Subject:** The AI side we talked about at the booth
- **Attach:** brisken-digital-co-worker.pdf (restructured Digital Co-Worker deck)
- **Who:** Carol Tse, Director Tech Consultancy; confirmed 2026-07-07 after LinkedIn review of the Adidas attendees (linkedin.com/in/carol-tse-938a89a0).
- **Why this angle:** on a Central Finance mission, scouting Rome; most interested in the AI cases (intercompany funding, remittance advice) and excited to build on OnePilot as CFIN progresses. Earliest-stage of the five, so nurture pace.

The note

Carol,

Good to meet you in Rome. Following up with the material on the AI cases from our conversation at the booth: intercompany funding and remittance advice, both running on your own SAP data.

These are not fixed apps: your team can build on OnePilot as the Central Finance work progresses, so it grows with the migration rather than sitting to one side of it.

When you are ready to look closer I would happily show the AI live. No rush; I know the CFIN move sets the pace.

Dirk

If quiet after ~2 weeks

Carol, whenever your Central Finance timeline makes room for it, the AI walkthrough is a short and worthwhile conversation. Here when you want it. Dirk

5. LSEG · Alessandro Bonizzoni

- **To:** alessandro.bonizzoni@lseg.com, marco.favalli@lseg.com
- **Cc:** silvester.hetesi@lseg.com, wikt.jaszcak@lseg.com (your sheet note asks "cc: with their colleagues?"; drop them if you would rather keep it small)
- **Subject:** Continuing the Rome conversation on SAP Treasury connectivity
- **Attach:** none (this is a call ask, not a send)
- **Why this angle:** your note: reach out to understand their offering and how they build a business with Corporates through SAP Treasury; it was not clear whether that is market data or trading, so the call is where they explain. Refinitiv is already one of our sources, so there is a real connectivity angle. Exploration, not a pitch.

The note

Alessandro, Marco,

Good to meet you in Rome. We got as far as the interesting part and ran out of time: how LSEG builds a business serving Corporates through SAP Treasury, and where our connectivity work into SAP could sit alongside it.

I would like to understand your offering properly, and share where we already connect the market-data and trading side into SAP for corporate treasuries. Refinitiv is already one of the sources we bring in, so there may be a natural fit worth exploring.

Would a short call in the next couple of weeks work? Happy to bring the right people from our side.

Dirk

If quiet after ~2 weeks

Alessandro, following up on a short call to compare notes on the SAP Treasury connectivity side. Whenever suits you and Marco. Dirk

Attachments in this folder

File	Goes with	Source
<code>brisken-market-data-hub.pdf</code>	JTI (note 2)	Restructured Market Data Hub deck, 12 pages
<code>brisken-digital-co-worker.pdf</code>	Adidas (note 4)	Restructured Digital Co-Worker deck, 10 pages
<code>brisken-smart-trading.pdf</code>	VW (note 1)	Restructured Smart Trading deck, 12 pages

All three are the restructured, redesigned decks (the same plain-language treatment, one visual system across the set). They replace the old 2024 renders Dirk retired. Editable sources live in `../decks/`.

The one thing this pack still needs from you

JTI: the volume-estimate information you promised them (note 2), plus Domenic's email if you have it. The draft sits in your Drafts with the deck attached; it is yours to complete and send. Everything else is ready to go.
