

Brisken Smart Trading

The trade lifecycle from venue to booked deal, straight through. No re-keying.

Formerly Trade Automation / TraderPlus. Now Brisken Smart Trading (BST).

- ◆ Captured at the execution venue and created in SAP TRM straight through, validated on the way in.
- ◆ Venue and TMS agnostic, so a new venue is a configuration change, not a rebuild.
- ◆ Four-eye approval and segregation of duties, built in as standard.
- ◆ Brings exposure, market data and execution onto one surface, logged back into SAP.

VENUE TO SAP, STRAIGHT THROUGH

01

Decide & approve

Decision, approval and execution, with the controls applied up front.

02

Execution venues

Captured at the venue: Bloomberg FX GO, FXall, 360T, BidFX and more.

03

SAP TRM

The deal is created in SAP TRM straight through, validated on the way in.

THE PROBLEM

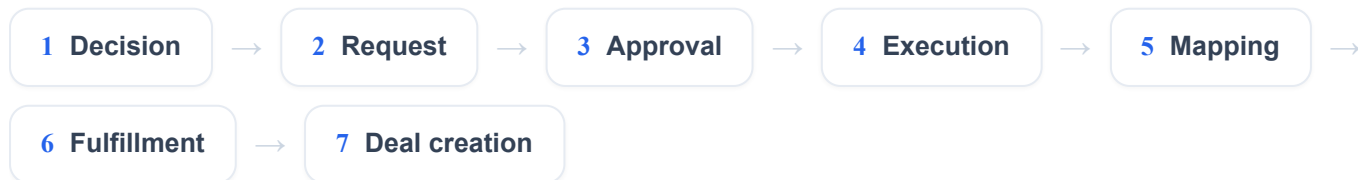

From the trade decision to the booked deal, straight through

Treasury desks still re-key trades from the venue into SAP TRM by hand. Someone executes on the trading platform, switches tabs to check exposure, then types the deal back into SAP. It is slow, it is a control risk, and it breaks the moment a venue changes a field.

Brisken Smart Trading captures the trade at the execution venue and creates the deal in SAP TRM straight through, validated on the way in. It brings exposure, market data and execution onto one surface and logs every action back into SAP under four-eye control. The manual middle is gone.

THE FULL TRADE LIFECYCLE

Decision to booked deal, in one flow

Decision, request and approval happen with the controls applied up front. The trade is captured at the execution venue and mapped into SAP, then created in SAP TRM straight through, validated on the way in. One end-to-end lifecycle, trading-venue and TMS agnostic, so trades flow into SAP Treasury and Risk Management as governed deals, reconciled to source.

BUILT IN

Built in

- + Four-eye approval and segregation of duties, as standard
- + No ABAP and no per-venue interface to maintain
- + Straight-through capture, so the manual re-key is gone

WORKS WITH

Any venue in, SAP TRM out

Captured at Bloomberg FX GO, FXall, 360T, BidFX, Citi Pulse and more, then created in SAP TRM. It is trading-venue and TMS agnostic, so a new venue is a configuration change, and the deal flows into SAP Treasury and Risk Management reconciled to source.

COMMON QUESTIONS

What is Brisken Smart Trading (BST)?

BST is the FX and trade-execution application in the family, and the live flagship. It brings exposure, market data and execution onto one surface and logs every action back into SAP under four-eye control.

How is a trade captured without re-keying it into SAP?

The deal is captured at the execution venue and created in SAP TRM straight through, validated on the way in. Because it is venue and TMS agnostic, adding a new venue is a configuration change rather than a rebuild.

PROOF

Listed on the SAP Store as Trade Automation, and the live flagship on SAP. Brisken is an SAP Co-Innovation Partner, certified to ISO 27001 and SOC 1 Type II.
