

MARKET DATA

Market Data Hub

Every rate, curve and price through one managed feed. No hand-keyed uploads.

- ◆ one managed feed
- ◆ every provider
- ◆ SAP + non-SAP
- ◆ no hand-keying

EVERY PROVIDER, ONE FEED

HOW IT WORKS

- 1 Ingest**
every provider's rates, curves and prices, each in its own format
- 2 Govern**
one managed feed controls entitlements and usage
- 3 Distribute**
the same number to SAP and non-SAP, both ways

- ◆ **One control point**
Every provider's entitlements and usage governed in a single place.
- ◆ **Same number everywhere**
It reaches every system that needs it, SAP and non-SAP, both ways.
- ◆ **Scripts retire**
Point-to-point uploads collapse behind one source of truth.
