

How your CRM data stays safe

The link between Brisken's Zoho CRM and the lead follow-up workbench, in plain terms. Prepared 26 June 2026.

We connected to your Zoho CRM for one reason: to label which of your Rome contacts are already Brisken customers. **Here is exactly what that connection can and cannot do.**

THE PATH YOUR DATA TAKES

1

Your Zoho CRM

Your contacts and company records. Your system, fully under your control.

reads only, never writes

2

A script on one computer

Runs locally on our machine. It reads two things only: contact names and company records.

stays on that one computer

3

A hidden local file

The result is saved to a file that is blocked from being uploaded, shared, or sent anywhere.

used only to match

4

Your Rome contact sheet

Each lead gets one simple label: an existing Brisken customer, or not.

FIVE GUARANTEES, IN PLAIN TERMS

READ ONLY

We can only read, never change

We asked your CRM for permission to read two things: your contacts and your company records. We did not ask for, and cannot use, any power to change, add, or delete anything in your system.

LOCKED KEY

The access key never travels

The key sits in a hidden file on the local machine. Two independent locks stop it from ever being uploaded or shared, so it cannot reach GitHub or the open internet.

LOCAL ONLY

Nothing leaves the machine

The connection talks directly to Zoho and to nothing else. There is no third party, no outside service, and no cloud copy of your data anywhere.

NOT EXPOSED

Nothing sits in the open

The data is written only to a hidden local file. It never goes into anything that gets published, deployed, or emailed, and it is not part of any shared project folder.

ONE CLICK

You can switch us off instantly

You can cut our access at any moment from your Zoho admin screen. The second you do, the connection stops working, and nothing we hold can bring it back.

If you ever want it gone

In Zoho, open the API console, find the connection named "Self Client", and revoke it. Access ends immediately, with no further step needed on our side.
