

TreasuryCentral

One cockpit for the whole treasury, on your live SAP data. Market data, trading and AI, in one governed layer.

powered by OnePilot

Your live SAP data

TreasuryCentral

Every treasury decision

Your treasury runs on SAP. Your day runs on everything around it.

The morning rates

Three files, two portals, one copy-paste marathon before the first coffee.

The quick FX trade

Decide, request, approve, execute. Then someone keys it into SAP by hand.

The email errands

A transfer request lands by email. Someone reads it, checks the cash, books the memo, replies. Every time.

Sound familiar? None of it is SAP's fault. It is the manual middle around SAP.

So we built TreasuryCentral. One cockpit for the whole treasury.

-  Sits inside your SAP landscape, on SAP's own cloud. **1** cockpit for the whole treasury
-  Works on your live S/4HANA, ECC and TRM data. **0** code to run it
-  One governed layer for market data, trading and AI automation. **360°** audit on every change

Brisken. SAP treasury specialists and an SAP co-innovation partner. Built into SAP, not beside it.

It replaces the spreadsheets, not your SAP.

GOES

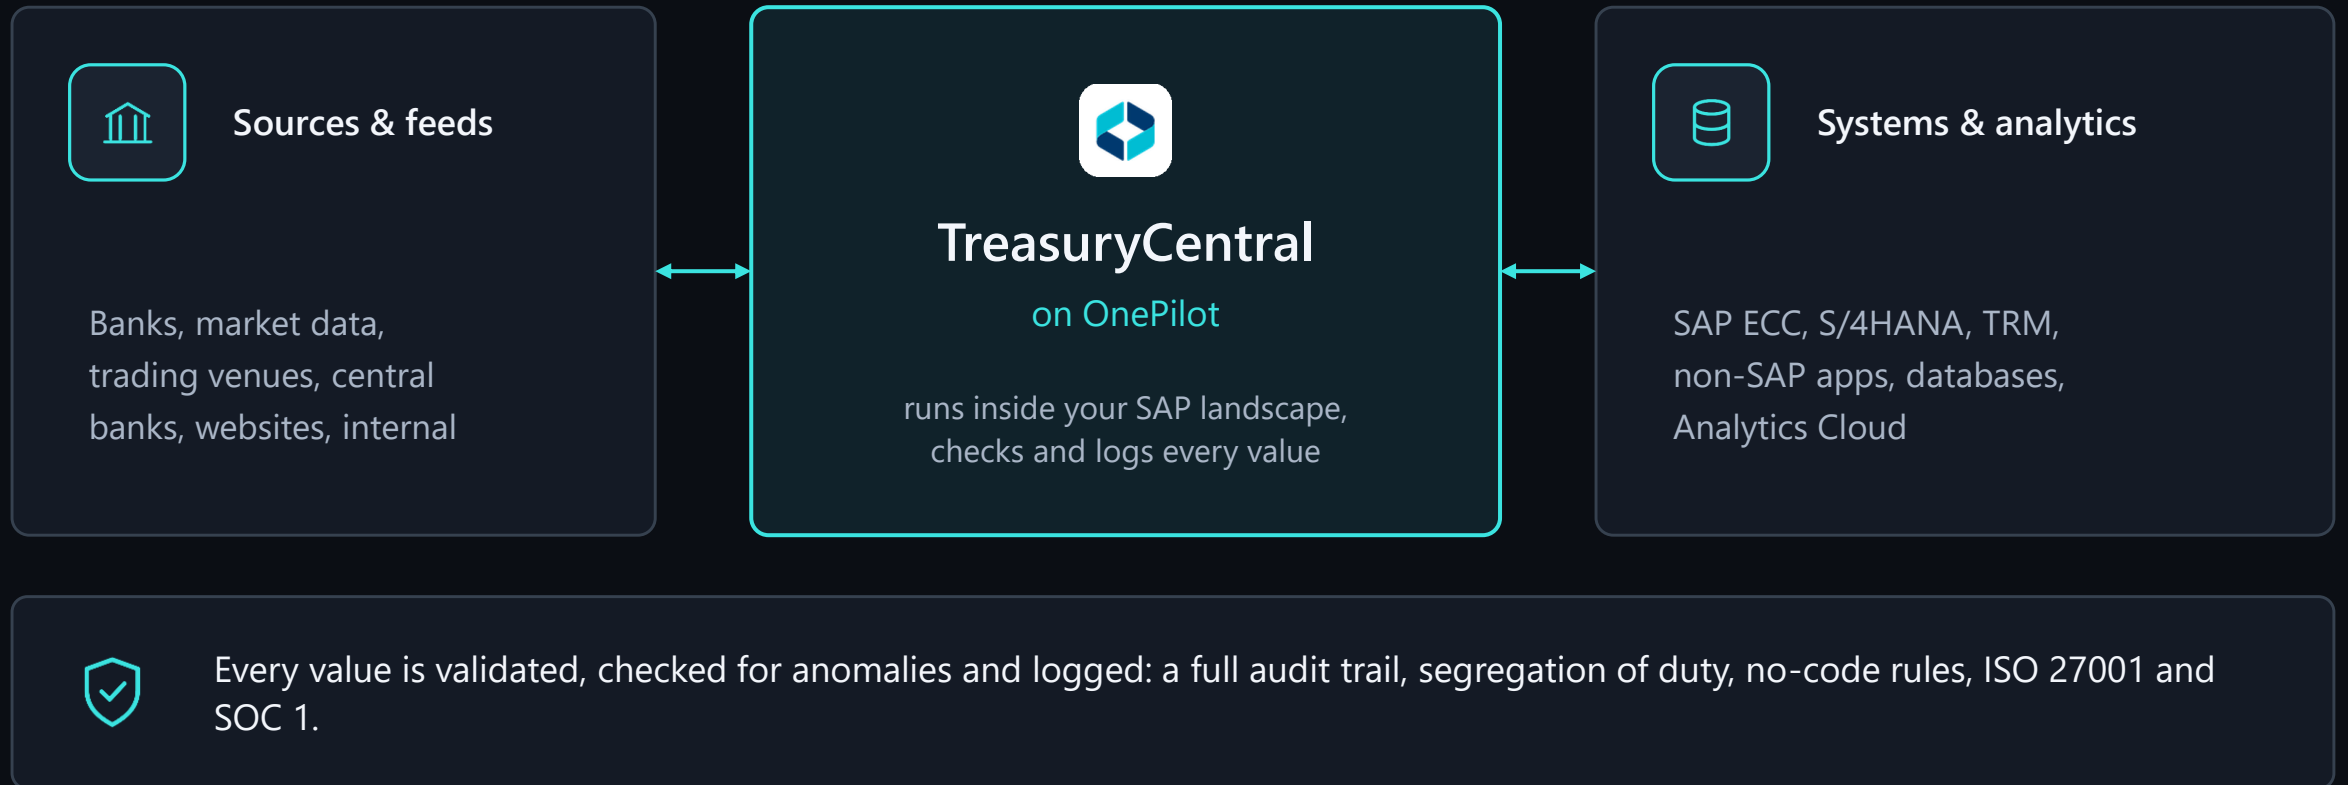

- ↪ Re-keying rates from portals
- ↪ Approval chains living in inboxes
- ↪ CSV shuffling between systems
- ↪ Swivel-chair work between venues and SAP

STAYS

- ✓ SAP as the single source of record
- ✓ Your TRM configuration
- ✓ Your bank connectivity

No rip-and-replace. No migration project.

The manual middle becomes a governed layer.

First, the numbers have to be right.

The morning rates, without the marathon.

Market Data Hub pulls every rate and reference you rely on, from any source, validates and cleanses it, and distributes one governed set to SAP and everything else. Anomalies are caught on arrival.

Bloomberg

Refinitiv

360T

OANDA

Central banks

Websites

The cockpit's instruments read true before anyone trades on them.

Capture. Refine. Deliver.

CAPTURE

Ingest from any feed or system: providers, central banks, agencies, websites, your own data. Any protocol, on a schedule or on demand.

REFINE

Validate, cleanse and transform. Every value checked as it arrives; sources aligned to one model; shaped for each target.

DELIVER

Push or pull into SAP and non-SAP systems, databases and analytics. Nothing re-typed.

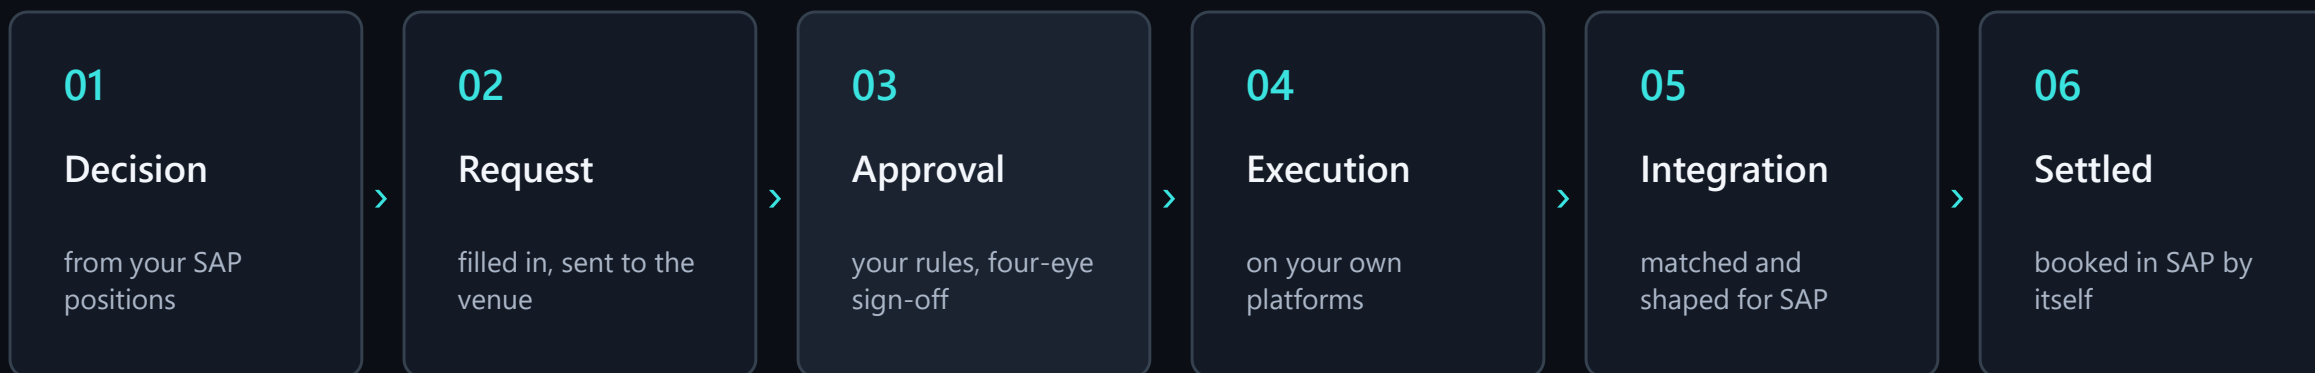

A decimal-shifted rate is caught on arrival and never reaches your TRM.

Full Market Data Hub deck available.

Then, the trades stop traveling by hand.

The numbers read true. Now the money moves on them.

Works with the venues your desk already uses:

360T

FXall

Bloomberg FX
GO

Citi Pulse

BidFX

Full Smart Trading deck available.

The manual middle, gone.

~12 min

manual, per trade

<1 min

through the governed flow

Manual FX execution: 10-15 min per trade. Source: The Association of Corporate Treasurers

Spot FX automation now ~90%. Source: LSEG

Then, the busywork gets a co-worker.

The data flowed. The trades flowed. This moves the judgment work.

Digital Co-Worker does the multi-system errands from plain chat or email, inside the same governed layer: it reads the request, pulls what it needs from your systems, does the steps, and reports back.

Domain specialists

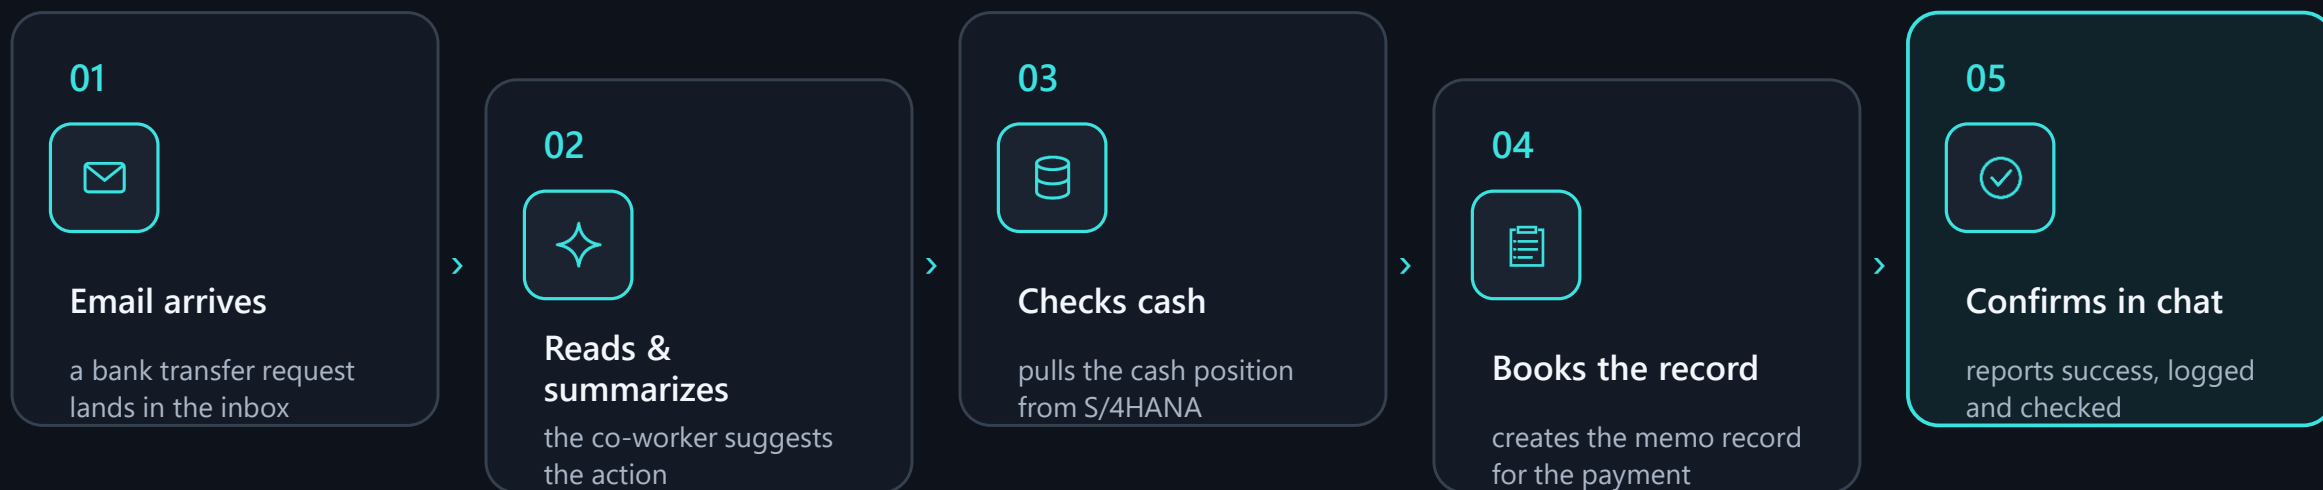

Personal assistants

Analysts

Clerks

One co-worker per person, each deep in its own area, all on your SAP data.

Watch one request handle itself.

An AI just booked into SAP. The next slide is why your auditor is fine with that.

Full Digital Co-Worker deck available.

Automation you can show your auditor.

A full audit trail

Every rate, trade and booking you just watched is recorded, end to end.

Four-eye approvals

The moves that matter wait for a second person.

Checks before anything posts

Odd or bad data is held back, never passed on unchecked.

No code to change it

Treasury owns the rules. No IT project.

ISO 27001

SOC 1

The security controls your auditors already expect.

Under the hood, it is one platform: **OnePilot**.

OnePilot is the layer underneath. It moves your data cleanly between systems, both ways, across SAP and everything else, with the checks and the AI built in. One way to connect to all of it:

SAP systems

Spreadsheets & files

Email

Web & APIs

Customer teams build on OnePilot directly today. TreasuryCentral is the same platform with the treasury cockpit on top.

Start with one app. The layer comes with it. The second and third land on a layer that is already there.

The data, the platform, and the teams behind it.

TECHNOLOGY PARTNER

TRUSTED BY TEAMS AT

MARKET DATA PROVIDERS

An SAP co-innovation partner. The cockpit runs on SAP's own cloud, so it sits inside your landscape.

Built to stay done.

Thirty minutes: we walk your team through the cockpit, live on a real system.

Deep-dive decks available for Market Data Hub, Smart Trading and Digital Co-Worker.
