

| ONEPILOT · TREASURYCENTRAL

TreasuryCentral

One cockpit for the whole treasury, on your live SAP data. Market data, trading and AI, in one governed layer.

Your live SAP data

TreasuryCentral

Every treasury decision

The whole treasury, one cockpit. Here is what that looks like.

01 What this is

TreasuryCentral on OnePilot: one cockpit on your live SAP data, with market data, trading and AI automation in one governed layer.

02 What it replaces

The manual middle between your sources and SAP: re-keyed rates, hand-reconciled positions, values chased across a dozen places.

03 What you get

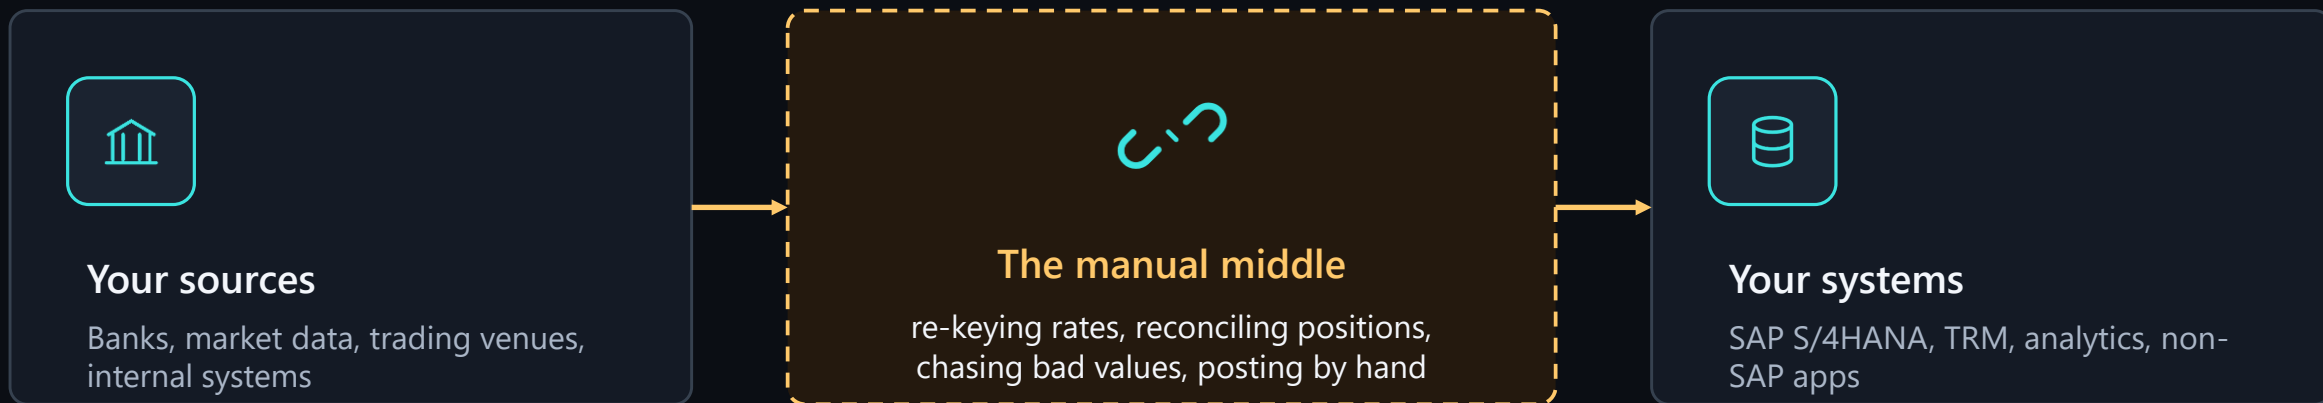

One clean, governed set of data driving every treasury decision: checked, logged, no code to run it.

04 Who it is for

A global treasury group on SAP: ECC, S/4HANA or TRM, one process, running the same way across the group.

The next page is where you are today. Then the cockpit, its three engines, and why it is safe.

A global treasury runs one process. The data behind it lives in a dozen places.

None of those steps is hard. Together they run a global process on hand-carried data.

One cockpit for the whole treasury.

The command center your team runs treasury from, on live SAP data, with market data, trading, and AI automation and orchestration around it. **All live with customers today, not on a roadmap.**

Market data

Every rate and reference, curated once

Trading

From capture to the deal in SAP

AI automation

Digital co-workers on your SAP data

All of it runs on **OnePilot**, on your own live SAP data (S/4HANA, ECC, TRM), checked and logged on every value.

Three engines, one governed layer.

Market Data Hub

Every rate and reference you rely on, from any source to every system.

Bloomberg

CME Group

Smart Trading

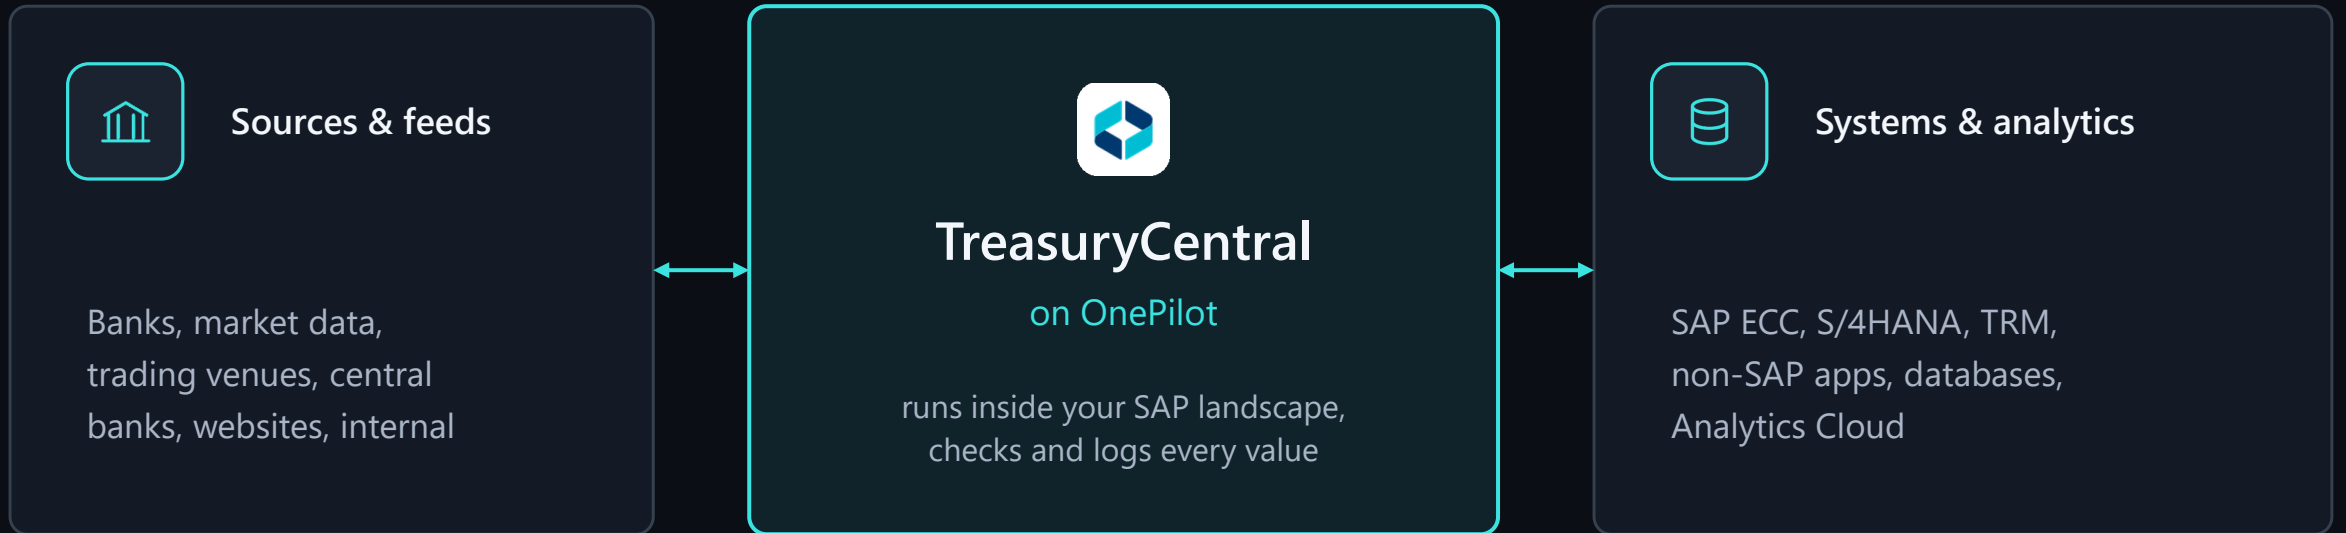

The manual middle between your trading venues and SAP, closed. From capture through to the deal in SAP.

AI automation & orchestration

Digital co-workers that read, decide and post on your own SAP data: remittance advice, intercompany funding, and more.

One layer between your sources and SAP. Both ways.

Every value through the layer is validated, checked for anomalies and logged. The next page is the full control set.

The controls are built in, not bolted on.

A full audit trail

Every value and every change is recorded, end to end.

Segregation of duties

The changes that matter need a second person.

Automatic checks

Odd or bad data is caught before it reaches a system.

Alerts on exceptions

You hear about the odd one out; the rest just runs.

No code to change it

Your rules, changed by your team, no IT project.

ISO 27001 and SOC 1

The security controls your auditors already expect.

TreasuryCentral is powered by OnePilot.

OnePilot is the layer underneath. It moves your data cleanly between systems, both ways, across SAP and everything else, with the checks and the AI built in. One way to connect to all of it:

SAP systems

Spreadsheets & files

Email

Web & APIs

Live in weeks, not a rebuild. It sits inside your SAP landscape, not beside it.

Customer treasuries run on it today.

Customer teams build on OnePilot directly, SAP and non-SAP, on-prem included, and move at the speed of their own ideas rather than a vendor roadmap.

Standardize the process once, governed and analytics-ready, and run it the same way across the whole group.

Built with SAP as a co-innovation partner; intercompany funding and remittance advice already run in production.

We build the data and AI layer for SAP treasury.

Built into SAP

An SAP co-innovation partner. The cockpit runs on SAP's own cloud, so it sits inside your landscape, not beside it.

Any source, any system

Provider and target agnostic. Pull from any feed, push to any system, SAP or not, and change your sources any time.

The whole treasury layer

Market data, trading and AI automation, governed in one place, with no code to run it.

1

cockpit for the whole treasury

0

code to run it

360°

audit on every change

Every decision, one cockpit.

When we talk, we'll walk you through how TreasuryCentral runs this: the process, the analytics and the governance, end to end.
