

Intercompany Funding Request

A subsidiary asks for cash by email. An AI co-worker runs the request in SAP. **A person approves every transfer.**

A funding request by email

OnePilot

Memo record and transfer in SAP

07:58 on a Monday. A funding request lands in the inbox.

FROM **Subsidiary treasury, Poland**

SUBJECT **Funding request, EUR 4.2M, value Thursday**

"We need EUR 4.2M on Thursday to cover the supplier run and payroll. Breakdown attached."

funding-breakdown.xlsx

What has to happen now

- 01 Confirm the amount, the entity and the value date
- 02 Check the group cash position and the entity's limits
- 03 Create the memo record in SAP
- 04 Stage the transfer and get the second approval
- 05 Confirm back to the subsidiary, then file the trail

Today, a person is the integration.

The judgment should stay with the treasurer. The typing should not.

So we built the fix. An AI co-worker on your SAP data.

It reads the request

The LLM reads the email and its attachment: entity, amount, currency, value date, purpose. Any wording, any format.

It checks the position

It fetches the live cash position and the entity's limits straight from SAP before it proposes anything.

It prepares the action

It creates the memo record, stages the transfer and drafts the confirmation email. Then it waits for you.

1

flow, inbox to SAP

0

values re-keyed

4-eye

on every transfer

Six steps, from the inbox to a governed transfer.

The agent does the typing. A person makes the call. Everything is logged.

The agent proposes. Your treasurer decides.

STEP 05 · APPROVE

One clean summary, one decision

The treasurer sees entity, amount, value date, purpose and the cash impact, next to the live position. One click approves, one click rejects. The second pair of eyes is built in, not chased by email.

STEP 06 · POST & CONFIRM

SAP updated, the subsidiary hears back

On approval the memo record and the transfer land in SAP, and the confirmation email goes back to the subsidiary. Every step of the chain sits on the audit trail.

The controls are built in, not bolted on.

A full audit trail

Every value and every change is recorded, end to end.

Segregation of duty

The changes that matter need a second person.

Automatic checks

Odd or bad data is caught before it reaches a system.

Alerts on exceptions

You hear about the odd one out; the rest just runs.

No code to change it

Your rules, changed by your team, no IT project.

ISO 27001 and SOC 1

The security controls your auditors already expect.

Live with customers today, not on a roadmap.

A chemicals company on SAP S/4HANA runs its funding-request process exactly this way: a complex multi-system integration with SAP, fully automated with AI.

It runs on **OnePilot**, the same governed layer under Market Data Hub and Smart Trading. One way to connect to all of it:

SAP systems

Spreadsheets & files

Email

Web & APIs

AI

Built to stay done.

Give us twenty minutes and we will show a funding request going from the inbox to a governed transfer in SAP.
