

Remittance Advice

Customers pay dozens of invoices in one transfer and explain it however they like. **An AI agent reads it and posts it into SAP cash application.**

Remittance advice, any format

OnePilot

SAP cash application

09:14. One payment arrives. It covers 40 invoices.

STATEMENT **One credit, EUR 187,340.12**

THE ADVICE **A PDF in the shared inbox**

40 invoice lines, two deductions, one credit note, in the customer's own layout. The next customer uses a different one.

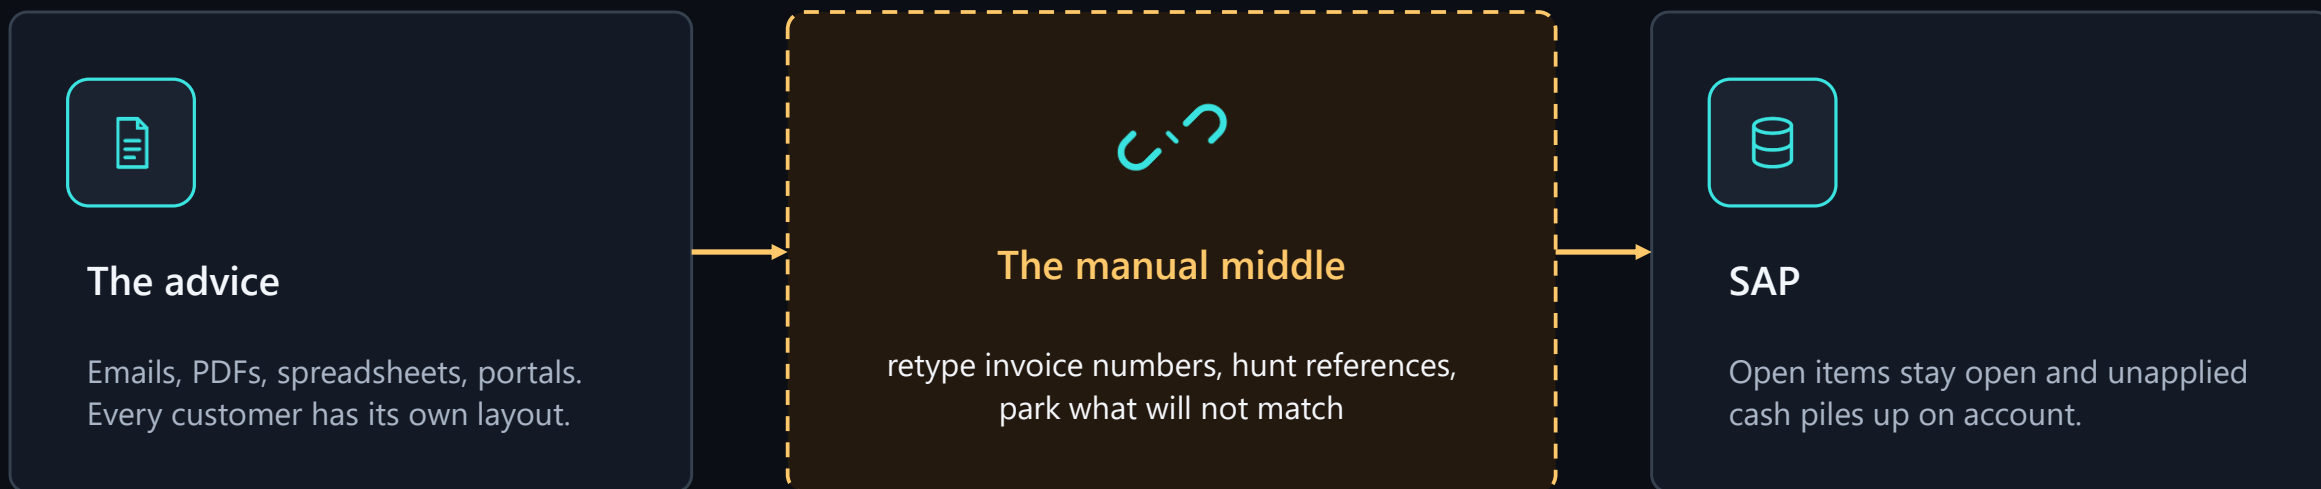

remittance-advice.pdf

What has to happen now

- 01 Find the advice that belongs to the credit
- 02 Read 40 lines and match them to open items
- 03 Explain two deductions and a credit note
- 04 Post the cash application in SAP
- 05 Move on: 30 more advices arrive today

Cash application runs on retyping.

The team spends the day being a parser, and the real exceptions still end up with them anyway.

So we built the gate. AI reads it, SAP books it.

It reads any advice

Emails, attachments, spreadsheets, portals. The LLM identifies invoices, amounts, deductions and credit notes in any layout, with no template to maintain.

It structures it for SAP

Each line is matched to the open items and delivered to SAP cash application, or to Serrala, BPI or HighRadius.

It learns from your team

What does not match lands in the monitor. A person decides, the gate learns, and the next one matches.

1

gate, every format

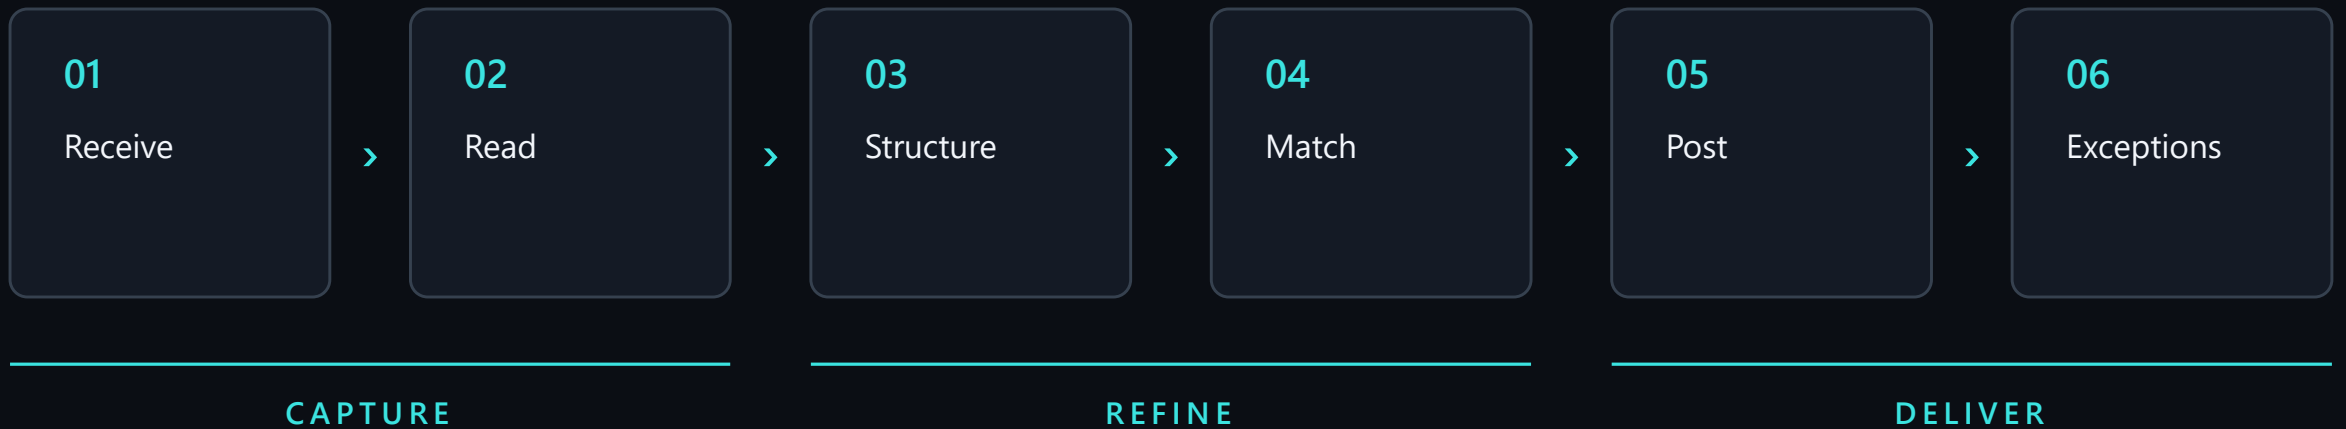

0

numbers retyped

360°

audit on every posting

Six steps, from the inbox to applied cash.

Straight through when it is clean. To a person when it is not. Everything is logged.

Clean advices flow. Odd ones ask a person.

STEP 06 · EXCEPTIONS

One screen, everything it read

A short-pay, an unknown deduction, a reference that matches nothing: the gate flags it in the monitor with everything it read, next to the open items. Your specialist decides in one screen.

AND THE GATE LEARNS

The same quirk does not come back

The decision is recorded and trains the gate, so that customer's quirk matches on its own next month. The routine work leaves. The judgment stays.

The controls are built in, not bolted on.

A full audit trail

Every value and every change is recorded, end to end.

Segregation of duty

The changes that matter need a second person.

Automatic checks

Odd or bad data is caught before it reaches a system.

Alerts on exceptions

You hear about the odd one out; the rest just runs.

No code to change it

Your rules, changed by your team, no IT project.

ISO 27001 and SOC 1

The security controls your auditors already expect.

Live with customers today, not on a roadmap.

An agricultural company on SAP S/4HANA Private Cloud runs remittance advice through the gate, powered by an LLM: the team is out of the retyping loop and in the exception loop.

It runs on **OnePilot**, the same governed layer under Market Data Hub and Smart Trading. One way to connect to all of it:

SAP systems

Spreadsheets & files

Email

Web & APIs

AI

Built to stay done.

Send us three of your ugliest remittance advices and we will show them landing in SAP cash application.
