

MARKET DATA

Market Data Hub

Every rate, curve and price through one managed feed. No hand-keyed uploads.

HOW IT WORKS

1

Ingest

Every provider's rates, curves and prices, each in its own format.

2

Govern

One managed feed controls entitlements and usage in a single place.

3

Distribute

The same number to SAP and non-SAP, both ways, straight through.

What it **retires**

- ✗ Per-provider upload scripts, maintained by hand
- ✗ Rates re-keyed into spreadsheets before they reach SAP
- ✗ Point-to-point integrations that break when a feed changes
