SAP S/4HANA

Posted, matched, exceptions surfaced.

HOW IT WORKS

An LLM reads the unstructured email or attachment, structures it, and posts to SAP S/4HANA. Matches happen on the way in, so clean items flow through and only exceptions surface.

WHAT IT DELIVERS

- ◆ Clean items post straight through, untouched by a person.
- ◆ Only genuine exceptions reach the team, with the source advice attached.

Already in production: **one S/4HANA customer removed the manual step entirely.**
