

REMITTANCE · INTO SAP S/4HANA

Remittance Advice Gate

Remittances read by AI, straight into SAP. Nobody retypes anything.

THE PROBLEM

Remittance advices arrive as unstructured emails and attachments, and someone has to read each one and key it into SAP.

HOW IT WORKS

WHAT IT DELIVERS

- ◆ An LLM reads unstructured remittance emails and attachments, structures them, and posts to SAP S/4HANA.
- ◆ Matched and governed on the way in, so exceptions surface and the rest flows through.
- ◆ Live in production today: one S/4HANA customer removed the manual step from remittance processing entirely.

◆ LLM-read	◆ matched + governed	◆ no manual keying	◆ full audit
